MINIATURES

We can supply a limited number in red, or pink. \$1.25 doz., any size.

Simple Rules of GLADIOLUS CULTURE

1. Glads do best in full sun and must have at least a half-day when the sun can reach them.
2. Any good garden soil will grow glads. Rotted manure is desirable. Use a side dressing of commercial fertilizer (5-10-10) when the bulbs are up.
3. Plant six inches deep. Space the bulbs so the crowns are four inches apart in the row.
4. After the plants have the fourth leaf they need to be kept wet till the florets are open.
5. Hoe, weed and cultivate, the more the better.
6. Use a water soluble DDT 5% spray or 5% dust once every two or three weeks from the time the glads start to grow to control thrips.
7. It is best to dip bulbs before planting. Dip 10 minutes in mixture of 2 oz. of Tersan 75 to one gallon of water. Keep the mixture well mixed while the bulbs are being dipped.

When shipped by us these bulbs are true to name, sound, healthy, and well packaged. As we have no control over the bulbs after they leave our hands, we are not responsible for the crop. We will be liable only for the purchase price of the bulbs, at the time that you receive the package.

- ★ We use 5-10-10 commercial fertilizer which we have for sale at the following rates:

5-lb. sack.....50c plus 30c for handling of parcel post orders.

10-lb. sack.....90c plus 50c for handling of parcel post orders.

- ★ For control of thrips we use 5% DDT dust which we have for sale at the following rates:

8-oz. shaker-top can.....75c 1-lb. sifter-top can.....\$1.25

5-lb. pkg. in a sack.....\$2.50 plus 30c for handling on parcel post orders.

- ★ At planting time we use Tersan 75 for the control of disease—we offer this product at 40c per 2-oz. package, which is enough to dip a fairly large retail order.
